# Other doctors said it was impossible.

## We made it happen.

*Dancing again  
– pain free*

Ángel Diaz doesn't just love dancing. It's his life. As a professional dancer and choreographer, he doesn't have time for pain or injury. After suffering from hip and leg pain for almost a year and receiving discouraging prognoses from other doctors, Angel turned to Dr. Figueroa at the Advanced Neuro Spine Institute™.

Dr. Figueroa diagnosed Angel's problem as degenerative disc disease and recommended minimally invasive surgery followed by physical therapy. Three months later, Angel was dancing again pain free.

*"It was a miracle,"* Diaz said.

**You, too, can find relief.

# Brain surgery on Tuesday.

*Preaching again  
on Sunday.*

## *Minimally invasive surgery – the answer to a prayer*

Pastor Evelio Quintero counts on his passion and energy to deliver inspirational sermons every Sunday. When he began to feel fatigued and noticed his peripheral vision declining, he knew something was wrong.

Doctors discovered Pastor Quintero had a pituitary tumor. Using a minimally invasive technique, internationally recognized neurosurgeon Santiago Figueroa, M.D., of the Advanced Neuro Spine Institute™, removed Pastor Quintero's tumor through a nostril.

*Surgery on Tuesday. Driving on Thursday. Back in the pulpit on Sunday.*
